Currency Exchange

Currency exchange involves bid-ask spread.

Exchange Rate Risk

Currency exchange rates are affected by a wide range of factors, including national and international financial and economic conditions and political and natural events. The effect of normal market force may at times be countered by intervention by central banks and other bodies. At times, exchange rates, and price linked to such rates, may rise or fall rapidly. The fluctuations in the exchange rate of a foreign currency may result in losses in the event that you convert HKD to any foreign currency or vice versa.

RMB Currency Risk

RMB is currently not freely convertible and is subject to exchange controls and restrictions (which are subject to changes from time to time without notice). You should consider and understand the possible impact on your liquidity of RMB funds in advance. The fluctuation in the exchange rate of RMB may result in losses in the event that you convert RMB into other currencies. Onshore RMB and offshore RMB are traded in different and separate markets operating under different regulations and independent liquidity pool with different exchange rates. Their exchange rate movements may deviate significantly from each other.

Securities Trading

It is as likely that losses will be incurred rather than profits made as a result of buying and selling securities.

Securities Margin Trading

If a client maintains a margin account with the Bank, the risk of loss in financing a transaction by deposit of collateral is significant. The client may sustain losses in excess of the client's cash and any other assets deposited as collateral with the Bank. Market conditions may make it impossible to execute contingent orders, such as "stop-loss" or "stop-limit" orders. The client may be called upon at short notice to make additional margin deposits or interest payment. If the required margin deposits or interest payments are not made within the prescribed time, the client's securities collateral may be liquidated without the client's consent. Moreover, the client will remain liable for any resulting deficit in the client's account and interest charged on the client's account. The client should therefore carefully consider whether such a financing arrangement is suitable in light of the client's own financial position and investment objectives.

Online Investment Trading Services

Due to unpredictable network traffic congestion and other reasons, the Internet and other electronic media may not be reliable media of communication and transactions conducted over the Internet and via other electronic media are subject to: (i) possible failure or delay in the transmission and receipt of instructions for any or all transactions in investment products or other information, and (ii) possible failure or delay of execution or execution at prices different from those prevailing at the time when your instructions were given. There are risks associated with the online investment trading system, including the failure of hardware and/or software, and the result of any such system failure may be that your orders are either not executed according to your instructions or are not executed at all. There are risks of interruption, distortion, omission, blackout or interception during the transmission of instructions for any or all transactions in investment products, as well as of any misunderstanding or errors in communication.
